

East Zone

The East Zone is 40km² encompassing several gold-bearing intrusions including the Bonnefond South, New Louvre, and Bevcon Intrusive. Each of these targets is highly prospective and span 9km strike length

Bonnefond South

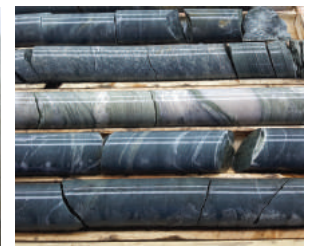

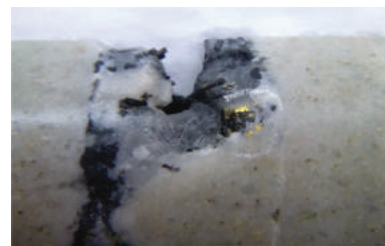

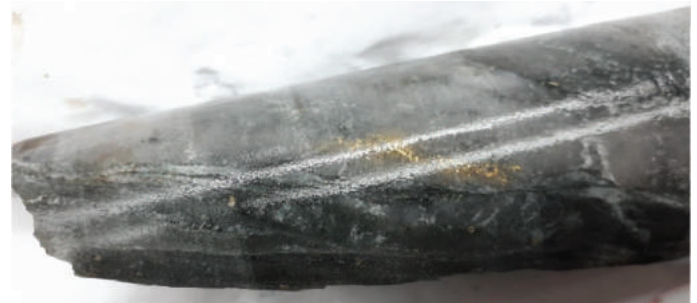

Evaluated Tonalitic Plug

Phase 1 - Consists of 9 holes for 4,331m testing vein, fault, and shear orientations to confirm thick gold intersections within the Tonalitic Plug

Evaluate Eastern Extension

Phase 2 - 12,000m drilling campaign to test the eastern extension of this gold-bearing system and secondary vein orientations within the plug

New Louvre

Drill Testing Multiple Gold Showings

Initial reconnaissance drilling program underway totaling 5 holes for 2,000m over a 1.2km strike

Bevcon Intrusive

Drill Testing Northern Contract

Drill Testing Western Extension

The Bevcon Intrusive hosts multiple prospective targets, with limited historical drilling.

Bevcon mine produced 438,250 ounces of gold grading 4.3 g/t Au from 1945 to 1967 – the 6th largest gold producer in Val d'Or Mining Camp

QMX Gold is a Quebec based exploration company focused on exploring their extensive and highly prospective land package on the Abitibi Greenstone Belt in the Val d'Or East Mining Camp.

QMX Strategy

Building on a broad database of historical information and applying revised geological models, QMX is systematically exploring prospective targets across their ~200km² land package

QMX Gold is located in Val d'Or East Mining Camp on the Southeastern portion of the

Historically, the Val d'Or Mining Camp produced significant quantities of gold, silver, copper and zinc

The Abitibi Greenstone Belt, is a known mining region, with a rich history of discoveries and mining in precious and base metal deposits

Future Developments

Phase 2 drilling in Bonnefond South

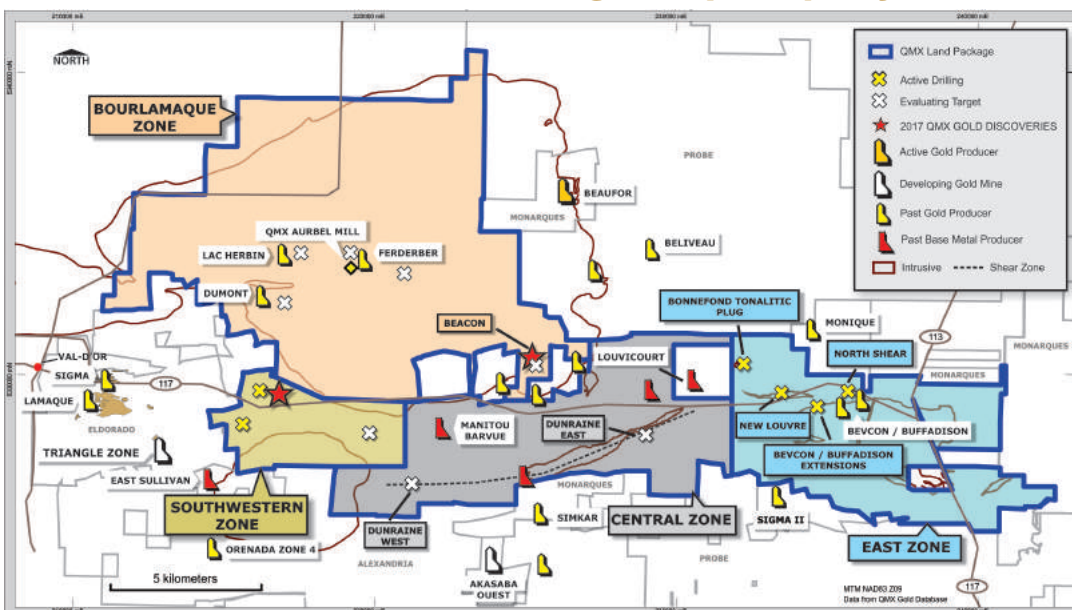

Multiple targets identified on and around the Bevcou Intrusive with drilling currently North and West along the contact

Initiated a reconnaissance drilling program on New Louvre target, between Bonnefond South and Bevcou Intrusive

These 3 high prospective targets cover a strike of ~9km
